Citrix Certified Professional - App Delivery and Security (CCP-AppDS)

Zetlan Technologies

Online Course

ZETLAN TECHNOLOGIES
www.zetlantech.com

Course Modules

1. Introducing Citrix Web App Firewall
- Determine how to audit for PCI-DSS compliance.
- Determine the appropriate methodology
- Determine the functionality of Citrix Web App Firewall

2. Citrix Web App Firewall Profiles and Policies
- Determine how to configure Citrix Web App Firewall Policies
- How to create or implement (binding) Citrix Web App Firewall
- Determine how to configure Citrix Web App Firewall learning
- Determine how to analyze Citrix Web App Firewall settings

3. Implementing Citrix Web App Firewall Protections
- Determine how to configure security checks
- Determine how to analyze data flow
- How to config rules & adaptive learning to meet the needs
- Determine how to create or modify signature rules based
- How to configure the various top-level protections based

4.Additional Citrix Web App Firewall Protections

- Determine how to configure cookie consistency checks
- Determine how to configure advanced form protection checks
- How to appropriately protect URLs based on a description
- How to appropriately protect the data based on a description

5.Monitoring and Troubleshooting Citrix Web App Firewall

- Determine how to deploy Citrix Web App Firewall
- Determine how Citrix Web App Firewall interacts with apps
- Determine how to resolve Citrix Web App Firewall configuratn
- Determine how to Implement logging and reporting.
- Determine how to customize error pages
- Identify troubleshooting methods for Citrix Web App Firewall.

6.Citrix ADC Security and Filtering

- Determine how to implement HTTP Callout
- Determine how to implement IP rate-limiting
- Determine how to implement IP reputation
- Determine how to Implement AppQoE

7. Authentication using Security Assertion Markup Language
- Determine how to configure SAML

8. Authentication using OAuth and OpenID
- How to config OAuth & OpenID based on a description
- How to configure multi-factor authentication in a Citrix ADC

9. Introduction and Config of Citrix App Delivery Mngmnt
- Determine which features of Citrix App Delivery Management
- Determine what is needed for the Citrix ADM Service.
- Determine how to deploy Citrix Application Delivery Mngment
- How to perform the initial config of Citrix App Delivery mgmt
- How to create additional instances of Citrix App Delivery .

10. Managing and Monitoring Citrix ADC Instances
- Manage multiple instances in a single Citrix App Delivery
- How to manage the aspects of Authentication & Authorization
- Identify what data is captured & utilized with Analytics
- Configure and install SSL Certificates on Citrix App Delivery
- Determine how to monitor user connections using dashboards

11. Managing Citrix ADC Configurations

- Determine how to manage applications in a Citrix ADC
- Determine how to create, manage, and configure StyleBooks
- Determine how to complete configuration jobs

12. Integrated Caching

- Determine when to use static or dynamic content requests.
- Determine how to configure cache policies
- Determine which content group settings to configure

13. Front End Optimization

- Determine how to utilize front-end optimizations

14. Performance Tuning and Other Optimizations

- Determine how the Citrix ADC system uses HTTP connections
- Determine how to Tune HTTP and TCP behaviour's in Connectio
