# COURSE MODULES

## Module 1: Introduction to Cosmos DB

- What is Cosmos DB?
- Benefits of using Cosmos DB
- Key features & architecture
- Use cases & industries

## Module 2: Getting Started with Cosmos DB

- Setting up an Azure account
- Creating a Cosmos DB account
- Understanding APIs:
  - SQL API
  - MongoDB API
  - Cassandra API
  - Gremlin API (Graph DB)
  - Table API
- Choosing the right API for your application

## Module 3: Data Modeling in Cosmos DB

- Understanding partitioning & containers
- Best practices for data modeling
- Indexing in Cosmos DB
- Designing efficient queries

## Module 4: Querying Cosmos DB

- Writing SQL queries for Cosmos DB
- Using the SQL API Query Language
- Query optimization & indexing
- Cross-partition queries

## **Module 5: Performance Tuning & Scaling**

- Request Units (RUs) & pricing
- Scaling strategies: Manual vs. Auto
- Multi-region replication & global distribution
- Consistency models (Strong, Bounded Staleness, etc.)

**Cosmos DB**

## **Module 6: Developing Applications with Cosmos DB**

- Cosmos DB SDKs: .NET, Java, Python, Node.js
- CRUD operations using SDKs
- Working with stored procedures, triggers & UDFs
- Integration with Azure Functions & Logic Apps

## **Module 7: Security & Compliance**

- Role-Based Access Control (RBAC)
- Network security & firewall configurations
- Encryption & compliance standards
- Auditing & monitoring

## **Module 8: Backup, Restore & Monitoring**

- Backup policies in Cosmos DB
- Point-in-time restore
- Monitoring with Azure Monitor & Application Insights
- Logging & troubleshooting

## **Module 9: Advanced Topics**

- Change Feed & real-time data processing
- Event-driven architecture with Azure Event Hubs
- Hybrid transactional/analytical processing (HTAP)
- Machine learning with Cosmos DB
