Online Course

designed by freepik.com

Course Modules

1. Architecture

- Identify the components and services in a WebSphere Application
- Design various WebSphere Application Server topologies
- Appropriate design considerations when architecting topologies
- Understanding of how requests traverse various WebSphere App
- Demonstrate an understanding of the administration activities
- Identify and describe the components of the WebSphere App

2. Product Installation, Configuration and Maintenance

- Demonstrate an understanding of the IBM Installation Manager
- Perform a silent installation process for WebSphere Application
- Perform pre and post installation verification.
- Troubleshoot installation problems.
- Create and manage Full and Liberty profiles.
- Manage nodes in a WebSphere topology, for example, managed
- Backup & restore configuration including the use of checkpoints.

3. Application Management

- Explain the structure of enterprise applications, web applications
- Deploy applications to a WebSphere App Server environment.
- Configure resources, for example, data sources, JNDI, class paths
- Use the IBM Rational App Developer for WebSphere Software
- Understanding of the administrative tasks required to take

4. Administrative Tools

- Usage of the Integrated Solns Console (ISC) and its various tools
- · Use the standard set of command line administrative tools
- Capabilities of the Job Manager tooling including the submission
- · Use scripting to perform administrative tasks, for eg, scripting
- Write, test, and debug scripts by using the IBM Rational App
- Configure or modify a WebSphere Application Server environmnt

5. Security Configuration and Maintenance

- Configure user repositories.
- Configure SSL for clients & servers, for example, create certificts...
- Discuss the implications of resource security settings.
- Implement multiple security domains.
- Apply administrative and application security roles.
- Configure differnt authentication and authorization mechanisms
- Config Java Enterprise, Liberty, Web and Web Services Security.

6. Clustering and Workload Management

- Configure clusters in workload management topologies.
- Configure and manage the HTTP server & the web server plug-in.
- Configure distributed session management for high availability
- Config messaging engine policies for clustered service integration
- Configure high availability using core groups.
- Utilize the capabilities of the Liberty collectives.

7. Intelligent Management and Resiliency

- Use the dynamic cluster elasticity feature.
- Configure On Demand Routers (ODR) and the ODR plug-in
- · Use health policies and actions to monitor and react to changing
- Configure and maintain application editions.

8. Performance Monitoring and Tuning

- Tivoli Performance Viewer (TPV) to monitor the WebSphere App
- Tivoli Performance Viewer (TPV) Advisor & the Diagnostic Advisr
- Tune parameters, for example JVM settings, connection pools
- Performance Monitorg Infrastructre (PMI) metrcs & poll MBeans
- Config & monitr the WebSphere App Server caching mechansms.
- Configure multi-cell performance management.

For Enquiry: +91 8680961847

9. Problem Determination

- High Performance Extensible Logging (HPEL) & view HPEL data.
- Cross Component Trace (XCT) & view trace data in XCT Log Viewr.
- Use tools to trigger and analyze heap dumps, javacore dumps
- Configure diagnostic tracing.
- Use "mustgather" doc & the IBM Support Assistant to collect
- Configure, review and analyze log files for example, (FFDC)

Zetlan Technologies

LEARN REMOTELY!!

The efficiency of online learning in terms of time management, flexibility, and the ability to access resources anytime, anywhere can be compelling.
