

# Design Associate

## (JNCIA-Design)

# Online Course

**ZETLAN TECHNOLOGIES**  
[www.zetlantech.com](http://www.zetlantech.com)

# Design Associate (JNCIA-Design)

## Course Modules

### 1. Identify initial network design requirements

- Juniper Networks life-cycle service approach
- Proposal boundaries and considerations
- Greenfield and brownfield deployments
- Top-down networks
- Capacity planning

### 2. Identify the roles of different Juniper products and solutions

- Routers
- Switches
- Security
- WLAN
- Software-defined networking (SDN)
- Network management

### 3. Identify security design principles

- General security design and considerations
- Securing a data center
- Securing the campus WAN
- Zero-trust security
- Secure access service edge (SASE)

# **Design Associate (JNCIA-Design)**

## **4. Identify network design considerations for business continuity**

- High-resiliency design
- Link- and device-level redundancy
- Multihommed Ethernet Segment Identifier Link Aggregation Grps
- Juniper Networks SRX Firewalls redundancy
- Virtual chassis
- Campus redundancy best practices

## **5. Identify design considerations for network automation**

- Benefits of network automation
- Juniper automation products
- Junos® XML, Representational State Transfer (REST), JSD APIs
- Junos OS on-box and off-box automation

## **6. Design considerations for network management strategies**

- Network management methodologies
- Separation of production and management traffic
- Configuration backups
- Remote console access
- Juniper network management strategies

# Design Associate (JNCIA-Design)

## 7. Identify considerations for a wired campus or branch LAN

- Campus LAN design best practices
- Modular design
- Subnet and VLAN design
- Access control design
- Ethernet VPN-Virtual Extensible LAN (EVPN-VXLAN) architecture
- Campus oversubscription ratios
- Campus design architectures

## 8. Identify considerations for a wireless LAN

- WLAN design phases
- Gathering business requirements
- Gathering technical requirements
- Device types
- Designing secondary coverage
- Designing real-time location services
- Access point (AP) coverage patterns
- Co-channel contention
- Gathering RF requirements
- RF modeling

# **Design Associate (JNCIA-Design)**

## **9. Identify considerations for a campus or branch WAN**

- Campus or branch WAN connectivity functions
- Best practices for designing the campus or branch WAN
- Campus WAN performance
- Campus WAN VPN design
- Campus active/active and active/passive high availability (HA)

## **10. Identify considerations for an SD-WAN**

- SD-WAN design considerations
- SD-WAN devices
- Assurance models
- SD-WAN intersite connectivity

## **11. Identify considerations for general data center network**

- Data center design best practices
- Traffic patterns
- Virtual chassis
- Environmental considerations
- Data center fabric architectures

# **Design Associate (JNCIA-Design)**

**For Enquiry: +91 8680961847**

## **12. Identify considerations for IP fabric-based data center network**

- Benefits of IP fabric over other data center architectures
- Design options with IP fabrics
- Spine-and-leaf device placement recommendations
- Underlay and overlay design
- Routing protocol selection
- IP fabric best practices
- IP fabric scaling
