# System Center Data Protection Manager

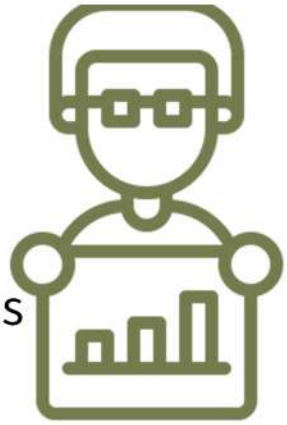
## Course Modules

1. **System Center Data Protection Manager course:**
   - Introduction to System Center Data Protection Manager (DPM):
   - Overview of DPM and its role in data protection
   - Understanding the importance of data backup and recovery
   - Exploring DPM features and capabilities

2. **Planning and Deployment:**
   - Assessing backup requirements and infrastructure needs
   - Planning DPM deployment architecture
   - Installing and configuring DPM servers and agents



3. **Protection Group Configuration:**
   - Creating protection groups for data backup
   - Configuring backup schedules and retention policies
   - Implementing protection for various workloads

4. **Backup and Recovery Operations:**
   - Performing full, incremental, and differential backups
   - Monitoring backup jobs and alerts
   - Managing backup storage and disk allocation

5. **Disaster Recovery Planning:**
   - Plan and implement disaster recovery strategies with DPM
   - Configuring offsite backup and replication
   - Performing data recovery in case of disasters or data loss events

**6. Tape Backup and Archiving:**

- Configuring tape backup and archiving in DPM
- Managing tape libraries and media pools
- Implementing long-term data retention and archival policies

**7. Data Migration and Consistency Checks:**

- Migrating data between storage pools and volumes
- Performing consistency checks and integrity verification
- Resolving data consistency issues and errors

**8. Protection for Virtualized Workloads:**

- Protecting virtual machines (VMs) with DPM
- Config backup & recovery for Hyper-V and VMware environments
- Implementing host-level and guest-level backups

**9. Application-Aware Protection:**

- Configuring application-aware backup for Microsoft workloads
- Ensure consistency and integrity of app data during backups
- Recovering individual items from application backups

Zetlan Technologies

**10. Monitoring and Reporting:**

- Monitoring DPM infrastructure and backup jobs
- Generating and analyzing backup reports
- Configuring alerts and notifications for backup status and issues

**11. Security and Compliance:**

- Implementing security best practices for DPM
- Managing user roles and permissions
- Ensure compliance with data protection regulations and policies

**12. Troubleshooting and Maintenance:**

- Troubleshooting common DPM issues and errors
- Using DPM logs and diagnostic tools for diagnosis
- Performing routine maintenance tasks and software updates

**13. Disaster Recovery Testing and Documentation:**

- Planning and conducting disaster recovery drills
- Documenting disaster recovery procedures and runbooks
- Ensuring readiness for real-world disaster scenarios
