Red Hat Certified Specialist in Linux Performance Tuning

Course Modules

1. Use utilities to analyze system behavior

- Use utilities such as vmstat, iostat, mpstat, etc.,
- Use utilities such as Performance Co-Pilot (PCP)
- Use utilities such as dmesg, dmidecode, and sosreport

2. Monitor and alter kernel behavior

- Use /proc/sys, sysctl, and /sys
- Configure kernel behavior by altering module parameters

3. Analyze system and application performance

- Analyze system and application behavior using tools
- Configure systems to run SystemTap scripts
- Use the eBPF family of tools to diagnose sys & app behavior
- Multiple versions of applications that perform the same

4. Tune running systems

- Alter process priorities of both new and existing processes
- Select and configure tuned profiles
- Manage system resource usage using control groups

5. Tune memory utilization

- Configure systems to support alternate page sizes

Red Hat Certified Specialist in Linux Performance Tuning

For Enquiry: +91 8680961847

6. Configure disk and file subsystems

- Select proper I/O scheduling algorithm
- Tune file system layout for a given use

7. Tune network performance

- Calculate network buffer sizes based on known quantities
- Set system buffer sizes based on those calculations

A large, light gray watermark logo is centered in the background. It consists of a stylized 'Z' shape formed by two overlapping geometric shapes, with the text 'Zetlan Technologies' written in a sans-serif font below it.
